Figure 1 is a line graph showing the absorbance at 600 nm versus the concentration of the polymer solution (g/dl) for two polymers: BLR and WA837. The x-axis represents concentration in g/dl, ranging from -10 to 25. The y-axis represents absorbance at 600 nm, ranging from 0 to 80. Both curves show a linear increase in absorbance with concentration, with BLR having a slightly higher absorbance than WA837 at higher concentrations.
